## Profile

Results-driven IT professional with experience in all phases of software development and business process improvement. Demonstrated ability to lead teams in implementing and designing fintech and payments-based solutions, aligning business requirements with technology solutions. Experienced in process optimization, using proven technologies to take full advantage of every aspect of the software development life cycle and CI/CD workflows. Highly self-motivated to achieve real transformative improvements, in fast-paced hybrid environments.

## Education

**Bachelors in Information Technology – Information Systems** 2019 - 2022  
[University of Pretoria, Pretoria](#)

- Specialized in entrepreneurship and information systems to gain a greater understanding of how IT solutions can fulfill business needs.
- Took lead in multiple academic projects to increase my own leadership capability and how to increase team cohesion with diverse members.
- Improved personal documentation and technical skills by tutoring and providing support in system design.
- Explored entrepreneurship concepts related to IT, focusing on leveraging technology innovations to create and grow business ventures.

**High School Diploma** 2014 - 2018  
[Maragon Olympus, Pretoria](#)

- First Team Rugby, Grade Council Member, Top 10 Achiever and Character Award – capitalizing on every opportunity to develop as a leader by uniting with teams in different races and age groups exposing me to higher levels of empathy, strength of character and optimism.

## Employment

**Intermediate Software Developer** 2023 - Present  
[Amplifin: Payment Solutions, Pretoria](#)

- Led a cross-functional team of 5 in developing, testing, and implementing a **Point-of-Sale system**, aligned with Amplifin's fintech ecosystem.
- Defined and documented **business requirements, user workflows, and technical specifications for POS modules** such as transaction processing, employee management, and real-time sales reporting.
- **Drove process improvements** in the IT department through cost-benefit analysis, business case development, and process reviews, resulting in the launch of new **improvement projects for legacy systems**.
- Created detailed **process documentation**, user guides, and technical diagrams for internal handover and training.
- Engaged product managers, developers, and QA to create **custom automation test tools with comprehensive functionality** based on their feedback and usage insights, ensuring meaningful and user-driven change.
- Worked with cloud architectures such as **AWS and Azure** bringing a balance of **fast deployment cycles** and **secure role driven applications and containers**.

## IT Support

2019 - 2019

### Maragon Olympus, Pretoria

- Faster workstation installation by 50% through improved IT processes and standardized workstation setup for staff.
- Conducted monitoring of inhouse systems for system errors and worked on them to maintain low downtime and increase user satisfaction.
- Wrote onboarding guides for software and hardware systems, enabling colleagues to better comprehend it, thus effectively implementing business processes.

## Certificates

---

### Certificate in Foundational Payments PASA – Completed

May 2025

Developed a strong foundational knowledge of the South African payments ecosystem, including regulatory frameworks, key stakeholders, and the operational flow of payment streams within the National Payment System.

### AWS Certified Cloud Practitioner

2024

- Proven understanding of essential AWS services such as EC2, S3, IAM, and Lambda in deploying and managing cloud-based applications.
- Certified competence in articulating the value proposition of adopting AWS cloud solutions to stakeholders and business units in Pretoria-based organisations.
