

SUBMISSION REQUIREMENT 4

Relevant Experience

Delivery experience relevant to secure application processing, role-based review workflows, and document-heavy operational systems.

Document Type	Capability summary
Date	4 May 2026
Focus	Workflow, access control, scoring, and auditability

1. Comparable Delivery Areas

The closest comparable work for this project sits across admissions-style systems, structured review platforms, and secure internal workflow tools. These systems usually combine controlled intake, reviewer separation, score aggregation, document handling, and decision tracking.

Admissions and Scholarship Workflows
Application intake, document capture, ranking, and shortlist handling.

Recruitment and Evaluation Systems
Stage-based review, interview scoring, and final selection decisions.

Committee Review Platforms
Controlled reviewer visibility, scoring separation, and final moderation.

Compliance-Sensitive Internal Tools
Audit logging, restricted access, retention controls, and operational monitoring.

2. Why This Experience Fits

Project Need	Relevant Experience Pattern
Strict workflow order	Common in admissions, review panels, and hiring systems where later steps depend on earlier approvals.
Role-based visibility	Standard in multi-reviewer environments where reviewers must not see unrelated scores or decisions.
Comparative scorecards	Typical in ranking-based selection systems where applicants are compared across fixed criteria.
Secure document handling	Routine in platforms that store transcripts, certificates, IDs, and supporting records.
Audit and access records	Essential in systems where decisions and data access must be traceable.

3. Key Capability Areas

- building structured application flows with clear submission rules
- designing role-specific dashboards for reviewers and administrators
- implementing score calculations, ranking views, and shortlist logic
- managing secure file uploads, storage, and controlled exports
- adding audit trails and permission checks around sensitive actions
- supporting deployment, handover, and post-launch issue handling

4. Project Fit

This portal combines secure intake, reviewer-separated scoring, comparative ranking, interview handling, and final decision management. The proposed approach is built around those delivery patterns so the system remains practical for staff and clear for applicants.
